Overview

SITRANS FUE950 is a universal thermal energy calculator, which meets the requirements EN 1434 and has the MID and PTB K7.2 approval for energy metering with the media water.

SITRANS FUE950 has been developed for the SITRANS FUS380/ FUE380 and alternatively MAG 5000/6000 or FST020. SITRANS FUE950 is modular in construction and can by order be fitted with optional modules depending on the application. The FUE950 supports none of the SITRANS FX, FC products and only some of the FUS clamp-on products.

Benefits

Basic functions
- Prepared for heating, cooling measurement
- Approval for MID for heat metering and PTB K7.2 for cooling
- High-accuracy thermal energy metering, meets EN1434 requirements
- Measured temperature range -20 … +190 °C (-4 … +374 °F)
- Instantaneous values for energy/volume flow
- Battery or mains powered
- Battery version with battery lifetime of typically up to 10 years
- Optical data interface
- Real date and time
- Auto-detection of 2-wire or 4-wire temperature sensors

Additional functions
- Individual tariff functions
- Advanced functions for cooling/heating applications or the combination
- Memory for 24 periods (months, weeks, days)
- Data logger function
- Expandable functionality with 2 optional plug and play add-on modules
- Communication over M-Bus, RS 485 or RS 232

Add-on modules
- Plug-in module with 2 extra pulse inputs
- Plug-in module with 2 pulse outputs
- Plug-in module with combination of input and output pulses
- Plug-in module for M-Bus communication
- Plug-in module for RS 232 or RS 485 communication
- Plug-in module with 2 passive current outputs (4 ... 20 mA)

Application

The SITRANS FUE950 is able to handle 3 kinds of applications, means energy calculation in:
- District heating applications
- Chilled water applications
- Combined cooling/heating applications

Energy metering in heating, hot water applications (code “A” and “B”)

Energy metering in cooling, chilled water applications (code “C” and “D”)

Energy metering in combined cooling/heating applications (code “E” and “F”)
Flow Measurement
SITRANS F US Inline

SITRANS FUE950 energy calculator

Design
SITRANS FUE950 has an easy-read 8-digit LCD display with associated pictograms for the various functions. As the display has been made for several applications, some figures/symbols not used for normal district heating applications will be shown.

SITRANS FUE950 has a push button for simple operation and provides user-friendly control via the various display menu loops. The display will always be configured for the application chosen, and for the selected display settings.

The integrator has an IP54 plastic housing and is designed for wall or panel mounting. The housing comes with prepared rubber gaskets cable entries for fast and easy installation.

Operation menu loop structure
The FUE950 display has six menu loops and the menus are numbered in the display from 1 to 6. Some display menus consist of two values (to maximum seven) that are shown alternately at 4-second intervals.

The main menu loop no. 1 with the current data, e.g., for energy, volume, flow rate and temperature, is preprogrammed as default setting.

In the combined heating/cooling configuration the menu loop no. 5 (tariff menu loop) will be activated additionally.

Display and output pulses
Units: MWh, GJ, Gcal, MBtu, m³, gal, m³/h, GPM, °C, °F and kW; all decimal points are statically (the unit "gal" is shown with factor x 100).

The display unit and the last fractional digit are typical used for the pulse outputs.

Function
Technical principle
Calculation of energy is based on the following formula:

\[ \text{Energy} = \text{Volume} \times (T_{\text{Hot}} - T_{\text{Cold}}) \times K_{\text{factor}} \times (T_i) \]

Volume: Volume [m³] of a given amount of volume pulses

\(T_{\text{Hot}}\): Measured temperature in the hot line

\(T_{\text{Cold}}\): Measured temperature in the cold line

\(K_{\text{factor}}\) (Ti): Thermal coefficient of media enthalpy and heat content

The energy calculation is made by a counter and depends on temperature difference, pulse input frequency and legal requirements.

The calculator always carries out at least one energy calculation every 2 seconds. If the connected flowmeter has not sent enough pulses the energy calculation and flow indication is also based on the 8 seconds value.

Data memory
The FUE950 has a history memory of 24 periods (months, weeks, days). The following values are stored monthly, weekly or daily in the EEPROM on the programmed day of 1…31 (via software tool).

- Date/Time
- Energy
- Tariff energy 1
- Tariff energy 2
- Tariff definition 1
- Tariff definition 2
- Pulse counter input 1
- Operation hours

- Volume
- Error day counter
- Maximum monthly flow rate
- Maximum monthly power
- Date of maximum monthly flow rate
- Date of maximum monthly power
- Pulse counter input 2

Data logger memory (LOG)
The LOG of the calculator is stored every 24 hours with all cumulative values in the EEPROM. The storage frequency can be selected from various storage intervals (5, 6, 10, 12, 15, 20, 30, 60 minutes or the default setting of 24 hours). The data which are stored in the LOG could be read out using a software tool and can be used for evaluations.

Extract of possible LOG settings

</table>

Maximal Values
The integrator creates max. values for power and flow rate based on consumption time, which are stored in the EEPROM. The integration intervals are adjustable to 6, 15, 30 or 60 minutes and 24h. Default setting is 60 minutes.

Tariff/Accounting date function
The calculator includes two independent memories in which the accumulated energy at two programmable tariff dates are stored.

- Last accounting date
- Last but one accounting date

Values stored
- Energy
- Volume
- Tariff counter 1
- Tariff counter 2
- Pulse counter 1
- Pulse counter 2
- Date

The integrator offers two optional tariff memories for monitoring plant load states. Here it concerns threshold value tariffs. Extensive tariff conditions make it possible to adapt the calculator individually to the required customer-specific applications.

Both tariffs are separately configurable and independent from each other. Energy or time can be measured alternatively per tariff register dependent on the tariff mode adjusted in each case.

With the "time triggered tariff function" the switch-on time and the switch-off time are adjustable independent from each other for each day of the week in steps of 15 minutes.
The following tariff limit types of the tariff function are possible:
(This example applies to the display at 1 fractional digits after comma)

**Error handling and memory**

Events such as changes and faults are stored in a non-volatile memory with a capacity of up to 127 entries. The following events are recorded:
- Checksum error
- Temperature measurement error
- Error hours
- Start and end of test mode

If SITRANS FUE950 records an error, this will be automatically indicated by a "alarm symbol" on the display.

To protect the reading data, all the relevant data are saved in a non-volatile memory (EEprom). This memory saves the measured values, device parameters and types of error at regular intervals.

The following events are recorded:
- Temperature sensor error
- Swapped hot and cold temperature sensors
- Battery low warning
- Power supply failure
- Optical communication warning
- RAM checksum error

**Outputs/Inputs/Communication**

Communication interfaces:
SITRANS FUE950 is fitted with an optical infra-red send/receive port in accordance with EN1434/IEC 61107, protocol standard, EN 1434/EN 60870-3 (M-Bus protocol).

A specific optical head with a permanent magnet (IrDA-adapter) in accordance with EN 1434 can be used for readout data or communication with the parameterization software.

2 ports for optionally plug-in modules

The calculator features 2 ports for the plug-in modules.

One slot is for the function modules and the other for the communication modules.

**Communication modules**

The following communication modules are available as options: RS 232 module, RS 485 module and M-Bus module. The RS 232 and RS 485 communication modules are serial interfaces and permit data exchange with the calculator. For this purpose a special data cable is necessary.

The M-Bus module is a serial interface for communication with external devices (M-Bus Master/Centre). According to the M-Bus structure a number of calculators can be connected to a control centre.

**Pulse input module**

Two pulse inputs are available. The pulse value and the unit is configurable for energy, water, gas or electrical meter by parameterization software. Data are separate cumulated in different registers and are also stored on the two accounting day’s (Tariff registers).

**Combined Pulse Input/Output module**

Two pulse inputs combined with one pulse output are available on one module. The pulse inputs are configurable with value and unit the by parameterization software.

The pulse output is also programmable using the parameterization software.

**Pulse output**

The calculator provides levels for two optional external pulse outputs, which can be freely programmed using the parameterization software tool.

Default setting is one pulse which occurs per change in the least significant digit in the display with the unit and resolution selected by the device ordering.

Possible pulse output values:
- Energy (default setting)
- Volume (default setting)
- Tariff energy 1
- Tariff energy 2
- Tariff condition 1, limit switch
- Tariff condition 2, limit switch
- Energy error
- Volume error
- Volume with specific resolution (0.1, 1.0, 10 or 100)
- Energy with specific resolution (0.1, 1.0, 10 or 100)

**Combined current output module**

Optional module with 2 passive 4 ... 20 mA outputs.

Possible output values:
- Power (default setting for output #1)
- Flow (default setting for output #2)
- Hot, cold or difference temperature

The settings can be configured by parameterization software. The current output module occupies both ports, means no other plug-in module will possible to plug in.

**Module combinations**

The calculator has a group of extension modules for communication and another group of extension modules for additional functionality. These modules are available first selected within the calculator, or for retrofitting in the field.

One single function module as well as one single communication module out of following modules is selectable.

**Function modules:**
- Pulse input module, 2 inputs
- Pulse output module, 2 outputs
- Combined pulse module 2 inputs, 1 output
- Combined current output module, 2 x passive 4 ... 20 mA (occupies both ports)

**Communication modules:**
- M-Bus (M-Bus protocol according EN 1434-3)
- RS 232 (M-Bus protocol according EN 1434-3)
- RS 485 (M-Bus protocol according EN 1434-3)
Integration

SITRANS FUE950 is a multi-purpose energy calculator for media water which meets the requirements of EN 1434. Further, the energy calculator has been specially developed to process volume pulses from SITRANS FUS380/FUE380 or alternatively MAG 5000/6000 or FST020 transmitter.

Temperature input (always included)

Function

The temperature sensors must be connected to terminals 1-5 and 6-2 (TH) and 3-7 and 8-4 (TC) depending on cable type (2-wire or 4-wire).

Temperature range

| Absolute measuring range | -20 ... +190 °C (-4 ... -374 °F) for TH and TC |

Temperature difference

Start 0.1 K, min. 3 K, max. 177 K

Measurement cut-off

16-bit digital resolution AD converter

Display resolution

4-wire or 2-wire; auto detection of connection version

Sensor connection

Pt100 or Pt500 as 2-wire or 4-wire; Standard is Pt500.

Sensor cable length: up to 10 m (according EN 1434 and MID-type approval).

Flow input (IN0) (always included)

Function

Used as standard for flow input of the external flowmeter. The input is marked as 10 (+ Flow Pulse), 11 (- Gnd) on the terminal strip.

Note: The pulse input value selection must be the same as the pulse output setting of the flowmeter.

Typical accuracy of FUE950
Flow Measurement
SITRANS F US Inline

### Pulse value

- 1...1 000 l/pulse or 1...100 gal/pulse, selection by corresponding Order code. Will be shown at the device label.

### Pulse frequency

- ≤ 100 Hz (200 Hz)

### Pulse ON-time

- ≥ 3 ms

### Pulse OFF-time

- ≥ 2 ms

### Type

- Active pulse input

### Terminal voltage

- 3.6 V DC (supplied internally by FUE950)

### Flowmeter installation place

- The flowmeter installation place can be in the hot line or cold line ("forward or return pipe") selected by corresponding Order code. The "installation place" will be shown at the device display and nameplate.

### Connected cable

- Max. 10 m (shielded cables are highly recommended)

### Ports for option modules

#### Type

- The calculator features 2 ports for optional plug-in modules.

#### Function modules (Port 1 or 2)

- Pulse input module, 2 inputs (In1, In2)
- Pulse output module, 2 outputs (Out1, Out2)
- Combination module of 2 inputs (In1, In2) and 1 output (Out1)

#### Current output module (Port 1)

- 2 passive 4...20 mA (#1, #2) (occupies both port 1 and 2)

#### Communication modules (Port 1 or 2)

- M-Bus, RS 232 or RS 485 (M-Bus protocol, according EN 1434-3)

### Pulse output

#### Function

- The module contains connections for 2 pulse outputs, which can be programmed as desired using a software tool. The pulse outputs are marked as standard as O1, 'gnd' and O2, 'gnd' on the terminal strip and Out1 respectively Out2 in the display.

#### Type

- Passive "open collector" pulse inputs, outputs not potential isolated to each other, data are separate cumulated in different registers and are also stored on the two accounting day's.

#### Pulse value

- Last significant digits of the display (unit/pulse), selection by corresponding Order code and setting can be read via display menu, settings changeable via software tool

#### Pulse output 1

- Pulse frequency
  - ≤ 4 Hz
- Pulse width
  - 125 ms ± 10 %
- Pulse duration
  - 125 ms ± 10 %
- Pulse break
  - ≥125 ms -10 %

#### Pulse output 2

- Pulse frequency
  - ≤ 100 Hz, depending on the selected pulse length
- Ratio
  - Pulse duration/pulse break ≈ 1:1
- Pulse length
  - 5, 10, 50, 100 ms (default: 5 ms)
- External voltage supply
  - 3 ... 30 V DC
- Current
  - ≤ 20 mA with a residual voltage of ≤ 0.5 V

#### Possible pulse output selection

- Energy (default setting for 'Out1')
- Volume (default setting for 'Out2')
- Tariff energy 1
- Tariff energy 2
- Tariff condition 1 (limit switch)
- Tariff condition 2 (limit switch)
- Energy error
- Volume error
- Volume with specific display resolution (or with factor 0, 1, 10 or 100 thereof)
- Energy with specific display resolution (or factor 0.1 thereof)

### Pulse input

#### Function

- Add-on module for two additional counters. The pulse input 1 is marked as I1, 'gnd' and the input 2 as I2, 'gnd' on the terminal strip and indicated in the display as separate registers IN1 and IN2 and can also be transferred via the communication modules.

#### Type

- Passive "open collector" pulse inputs, outputs not potential isolated to each other, data are separate cumulated in different registers and are also stored on the two accounting day's.

#### Pulse value

- Pulse value and the unit are configurable for energy, water, gas or electrical meter by a software tool

#### Pulse frequency

- ≤ 8 Hz

#### Pulse length

- ≥ 10 ms

#### External voltage supply

- 3 V DC (supplied internally by FUE950)

#### Current

- Based on R i = 2.2 MΩ

#### Cable length

- < 10 m connection limit

### Current output module

#### Function

- The module contains connections for 2 passive current outputs, which can be programmed individually using the software tool. The outputs are marked as standard as #1 and #2, with corresponding polarity "+" and "-" on the terminal strip.

#### Terminal voltage

- External supply: 10 ... 30 V DC (passive output)

#### Signal range

- 4 ... 20 mA; 4 mA = 0 value and 20 mA = default maximum values for #1: Power in kW and for #2: Flow with the max. values and selected unit.

#### Defaults:

- For power it is the max. selectable value x 100 000 the last digit of display (e.g. 20 mA = 10 000 kW (1 digit res.) or 100 000 kW (0 digit res.).
- For flow it is the max. selectable value x 10 000 the last digit of display (e.g. 20 mA = 1 000 m³/h (1 digit res.) or 10 000 m³/h (0 digit res.).
Flow Measurement
SITRANS F US Inline

SITRANS FUE950 energy calculator

Load
Max. 800 Ω

Upper limit
Up to 20.5 mA (exceed causes the error current value)

Signal on alarm
Errors are indicated with 3.5 mA or 22.6 mA (programmable, default: 3.5 mA)

Output values
Power, flow, temperature (configuring via software tool; default: for #1: Power and for #2: Flow)

M-Bus output
Type
The optional M-Bus plug-in module is a serial interface for communication with external devices (M-Bus Repeater)

Protocol
M-Bus according EN 1434-3

Connection
The connection is not polarity-conscious and is electrically isolated, connection of 2 x max. 2.5 mm² wires, 300 or 2400 baud (auto baud detection), current drawn: one M-Bus load.

M-Bus address:
Each port has its own primary M-Bus address (Prim1 = the last two digits of the serial number; Prim2 = 0). The secondary address is unique for each calculator and is factory-set to equal the serial number.

230 V AC module (option)
Plug-in module for 230 V AC (195 ... 253 V AC), 50/60 Hz (incl. battery backup)

24 V AC module (option)
Plug-in module for 24 V AC (12 ... 30 V AC) (incl. battery backup)

Battery backup (option)
Only with mains supply modules by internal 3.0 V lithium battery (type CR 2032)
Displayed values, date and time are still updated, but the measuring functions have stopped, including the flow rate measurement. Communication via optional modules M-Bus, RS 485, RS 232 or optical interface is maintained, affecting the backup battery lifetime.

Power consumption
230 V and 24 V versions
Typical current appr. 0.15 VA

3.6 V D-cell battery
Typical battery lifetime 10 years under normal conditions (no add-on modules, max. 40 °C ambient temperature)

Supply data
Internal voltage 3.6 V by the battery or plug-in power supply module

Battery, 3.6 V type (option)
3.6 V lithium D-cell, battery lifetime typically 16 years with independently powered flowmeter

RS 232 output
Type
The optional module RS 232 is a serial interface for data transmission with external devices, e.g. PC; baud rate: 300 or 2400. The module contains a 5-pole terminal strip with terminals marked TX, RX 63 (GND) and 64 (GND). For this purpose a special data cable is necessary.

Protocol
M-Bus according EN 1434-3

Connection
The module contains a 5-pole terminal strip with terminals marked 62, 63, 64 (max. 2.5 mm²). Connected cable length: max. 10 m;
For communication with a PC a special adapter cable is required (Article No. A5E026111774).

RS 485 output
Function
The optional RS 485 module is a serial interface for data transmission with external devices, e.g. PC; baud rate: 2400. The module contains a 4-pole terminal strip with terminals marked D+, D-, Vcc and GND.

Protocol
M-Bus protocol according EN 1434-3

Connection
Terminals D+ and D-; electrically isolated, 2400 baud only.
An external supply of 12 V DC ± 5 V (<5 W) is needed for the module (terminals Vcc and GND). The module terminals are max. for 2.5 mm² wires. Connected cable length: max. 10 m

Accessories/Software
The parameterization software based on the M-Bus is a convenient tool for handling the calculator. It runs on Windows and is used for configuration of the calculator functionality, reading out different memories, printing out calculator logs. For further details please contact your local Siemens representative.

A specific optical head with a permanent magnet in (IrDA adapter with bluetooth) accordance with EN 1434 can be used for programming/altering programming of readout data, configuration data, etc. The reader head can also be used to change measuring data.

Dimensional drawings

SITRANS FUE950, dimensions in mm (inch)
Application

The temperature sensor set is designed for use with the Siemens energy calculator type SITRANS FUE950 for measurement of the energy consumption in a district heating or cooling net.

Temperature sensors are one of the integral components of every thermal energy meter in heating or cooling applications. They are used for determining temperature changes in fluids due to energy taken from or supplied to the loop. The temperature is thus measured by mounting temperature sensors upstream and downstream from the point where the exchange in the thermal energy of the system is.

To ensure an accurate measurement of the temperature difference according to MID (EN 1434) or PTB K7.2 the sensors are delivered as matched pairs.

By selection with the corresponding Order code the Pt500 sensor pair sets can be delivered with heating approval or with approvals for combined heating/cooling applications.

SITRANS FUE950 energy calculator

**Sensor pockets**

**Stainless steel sensor pocket (for 4-wire Pt500 types only - standard)**
- **Media temperature**: 0 ... 150 °C (32 ... 302 °F)
- **Approval**: Approved only together with 4-wire sensors
- **Medium**: Approved for heating/cooling water; up to max. 5 m/s flow velocity
- **Pressure rating**: PN 40
- **Length**: Face-to-face length 120/135 and 210/225 mm (4.72''/5.23'' and 8.27''/8.86'')
- **External diameter**: Protective tube 8/11 mm (0.32''/0.43'')
- **Internal diameter**: Protective tube 6 mm (0.24'')
- **Pipe connection**: Thread G 1/2'' (with sealing screw for sensor)
- **Material**: Stainless steel sensor pocket, stainless steel, dimensions in mm (inch)
- **Use**:
  - Use with related 4-wire Pt500 sensors only (according type approval)
  - For flow velocities up to 5 m/s
  - Recommended to install with welded sleeve (according to EU standard)

**Stainless steel sensor pocket (for 4-wire Pt500 types only - some only available as spare part)**
- **Media temperature**: 0 ... 180 °C (32 ... 356 °F)
- **Medium**: Approved for heating water
- **Response time T_{0.5}**: Typically 13 s at 0.4 m/s without pasta
  - Typically 5 s at 0.4 m/s with pasta
- **Pressure rating**: PN 25
- **Length**: L1 (mm) 92, 127, 168, 223
- **Material**: Stainless steel: AISI 316Ti/1.4571
- **Use**: For 2-wire Pt500 types only

**Brass sensor pocket (for 2-wire Pt500 types only - some only available as spare part)**
- **Media temperature**: 0 ... 150 °C (32 ... 302 °F)
- **Medium**: Approved for heating water
- **Response time T_{0.5}**: Typically 9 s at 0.4 m/s without pasta
  - Typically 5 s at 0.4 m/s with pasta
- **Pressure rating**: PN 16
- **Length**: L1 (mm) 47, 92, 127
- **Material**: Brass: CuZn40Pb2 (Ms58)
- **Use**: For 2-wire Pt500 types only

**Dimensional drawings**

**Pt500 2-wire temperature sensor pair (EN 1434)**
- **Cable length**: 2, 3, 5 or 10 m (‘C’ at the dimensional drawing)

**Pt500 4-wire temperature sensor pair (with MID and PTB K7.2 approval)**

**Stainless steel sensor pocket (for 2-wire Pt500 types only)**
- **Length**: L1 (mm) 92, 127, 168, 223
- **Material**: Stainless steel: AISI 316Ti/1.4571

**Brass sensor pocket (for 2-wire Pt500 types only)**
- **Length**: L1 (mm) 47, 92, 127
- **Material**: Brass: CuZn40Pb2 (Ms58)

Pt500 2-wire temperature sensor, dimensions in mm (inch)

Flow input setting (IN0)

The pulse input value selection must be the same as the pulse output setting of the selected flowmeter. To get optimal function and performance the pulse value must be selected as low as possible according to the maximum flow rate. The following calculation formula can be used for determining the lowest pulse value at a pulse length of 5 ms: L/pulse > Q_max (m³/h)/360. For example Q_max = 300 m³/h; L/pulse > 300/360; L/pulse > 0.83; therefore the pulse value must be 1 pulse.

Calculator application/Flowmeter installation place

For heating, flowmeter in return pipe (cold pipe), typical standard

For heating, flowmeter in forward pipe (hot pipe)

For cooling, media water, flowmeter in forward pipe (cold pipe)

For cooling, media water, flowmeter in return pipe (hot pipe)

(MID conformity declaration for heating)

For combined cooling/heating, flowmeter in return pipe (cold pipe as heating)

(MID conformity declaration for heating)

Temperature sensor type

Pt500 setup, no sensor pair included (standard)

Pt500 setup and Pt500 sensor pair (6/140 mm), 4-wire with 5 m connection cable, 6 mm sensor diameter and 140 mm sensor length. MID approved DE-06-MI004-PTB011, PTB approved 22.77/09.01, incl. factory test report (mentioned approvals are only valid if temp. sensors are used with the applicable temperature sensor pockets).

Pt500 setup and Pt500 sensor pair (6/230 mm), 4-wire with 5 m connection cable, 6 mm sensor diameter and 230 mm sensor length. MID approved DE-06-MI004-PTB011, PTB approved 22.77/09.01, incl. factory test report (mentioned approvals are only valid if temp. sensors are used with the applicable temperature sensor pockets).

Pt100 setup, no sensor pair included

Pt.500 setup and PT500 sensor pair (6/50 mm), 2-wire type incl. 5 m cable, 6 mm sensor diameter and 50 mm length, with MID approval (only for use with the applicable temperature sensor pockets)

Pt.500 setup and PT500 sensor pair (6/50 mm), 2-wire type incl. 10 m cable, 6 mm sensor diameter and 50 mm length, with MID approval (only for use with the applicable temperature sensor pockets)

Temperature sensor pocket sets: (for 6 mm sensor diameter)

No pockets (standard)

Brass pockets for 6 mm 2-wire sensors, length 82/92 mm, G½ inch, max. PN 16 (2 pcs.)

Stainless steel pocket, 120/135 mm length for 6 mm sensor diameter, max. PN 40 and max. 5 m/s (2 pcs. for 140 mm 4-wire sensors above)

Stainless steel pockets for 6 mm 2-wire sensors, length 117/127 mm, G½ inch, max. PN 25 (2 pcs.)

Stainless steel pocket, 210/225 mm length for 6 mm sensor diameter, max. PN 40 and max 5 m/s (2 pcs. for 230 mm 4-wire sensors above)

Stainless steel pockets for 6 mm 2-wire sensors, length 155/168 mm, G½ inch, max. PN 25 (2 pcs.)

Voltage supply

Battery 3.6 V DC (Litium D-cell type) (standard)

Mains power module for 230 V AC supply (incl. back-up battery)

Mains power module for 24 V AC supply (incl. back-up battery)

No power supply module (power supply ordering separate)

Other accessories for FUE950...

The diagram shows the connection between SITRANS FUE950 (terminals 10 and 11) and FUS380/FUE380 and MAG 5000/6000 (terminals 56 and 57). Temperature sensors must be connected to terminals 5 (1) and 6 (2) (T1) and 7 (3) and 8 (4) (T2).

Note:
The right flowmeter pulse output value must be equal to the FUE950 pulse input value and must be checked via the user menu of the transmitter MAG 5000/6000 or nameplate of FUE380 or FUS380.
